

How to set up journal email alerts

Email alerts containing the table of contents of journals will help you keep up to date.

There are different ways to set up journals alerts, but these are the easiest:

From ADHB Library Links E-Journals

Using the ADHB [e-journals](#) list you can set up alerts for journals that ADHB subscribes to:

EITHER, search for a specific journal **Title** eg,

- Search for *New Zealand Medical Journal* and click on **Health and Medical Complete**, Click on **Set up alert**, then type in your email.

OR, select **Keyword in Title**; enter a keyword to find journals with that keyword in the title eg,

- *psychiatry* finds 89 journal titles eg, follow the instructions for the following titles:
 - *American Journal of Psychiatry* - click on **Health and Medical Complete**, then **Set up alert**; and enter your email address
 - *Australian & New Zealand Journal of Psychiatry* - click on **Sage Journals**, then **Email Alerts** and sign in (first scroll down to **Sign Up** and register for a free username and password).
 - *British Journal of Psychiatry* - click on **Ovid version**, then **Email**, and enter your email address.

From Journal Websites

You can also set up alerts from a publisher or journal website.

This is useful for journals ADHB doesn't subscribe to – you can then use the [Request an article or book](#) form to get the full text of articles of interest; or you may be able to download the article from a University of Auckland library computer.

- Google a journal title eg, *journal of pediatric nursing*
- Click on 'New Issue Alert'(sometimes called 'Alert', 'Email Alert', 'TOC Alert')
- You may need to "Register" to create a free account.
